

INFORMATION ON THE QUALITY OF CUSTOMER ORDER EXECUTION PURSUANT TO DELEGATED REGULATION (EU) NO. 576/2017 - YEAR 2023

Purpose of the document

Pursuant to the regulatory sources listed below, this document illustrates:

- the top five execution venues where Banca Akros (hereinafter "Banca Akros" or "Bank")
 executed customer orders in 2023, breaking down the exposure by class of financial
 instrument and indicating, for each execution venue, the volume and number of orders
 executed at that venue, expressed as a percentage of the total volume of executions and
 the total number of orders executed at that venue, respectively;
- the top five entities (brokers) to which Banca Akros transmitted customer orders in 2023, breaking down the exposure by class of financial instrument and indicating, for each broker, the volume and number of orders executed by it, expressed as a percentage of the total volume of executions and the total number of orders executed through brokers, respectively;
- a summary of the conclusions that the Bank drew from the execution quality monitoring carried out for the year 2023.

Reference regulations

The regulatory sources referred to in this document are the following:

- Directive 2014/65/EU (MiFID II);
- European implementing regulations: Delegated Regulation (EU) 2017/576 (in particular, Article
 3, paragraph 1) and Delegated Regulation (EU) 2017/565 (in particular, Article 65, paragraph
 6);
- CONSOB Regulation on Brokers (in particular, Article 47, paragraph 7 and Article 50);
- ESMA Public Statement on "Deprioritisation of supervisory actions on the obligation to publish RTS 28 reports in light of the agreement on the MiFID II/MiFIR review (ESMA35-335435667-5871 of 13 February 2024).

INFORMATION ON THE TOP FIVE ORDER EXECUTION venues - YEAR 2023

(Article 3, Paragraph 1 of Delegated Regulation EU 2017/576 and Article 47, Paragraph 7, CONSOB Regulation on Brokers).

SUMMARY OF THE ANALYSIS AND CONCLUSIONS DRAWN FROM MONITORING IMPLEMENTATION QUALITY, GATHERED FROM THE IMPLEMENTATION VENUES - YEAR 2023

(Article 3, Paragraph 3 of Delegated Regulation EU 2017/576 and Article 47, Paragraph 7, CONSOB Regulation on Brokers).

Summary of the business model used by Banca Akros in the execution and transmission of customer orders

Banca Akros acts as broker-dealer for its customers, offering, for each financial instrument traded on regulated markets, multilateral trading facilities ('MTFs') and systematic internalisers ('SIs'), a service of access to one or more of these implementation venues, as well as, for shares, bonds and ETFs, an automatic research service for the best execution of the customer's order among the various execution venues reached.

In 2023, Banca Akros also acted as a market maker and/or executing broker on its own account for bonds through its own Systematic Internaliser, certificates, derivative instruments in equities, interest rates, exchange rates and the main commodities.

To achieve the 'best execution for the customer', the Bank takes the following criteria into account, in order of importance, when handling its customers' orders:

- price of the financial instrument;
- commissions and any other charges levied on the customer;
- speed of execution;
- quantity and nature of the order;
- likelihood of execution and settlement;
- any other characteristic of the order that relates to its execution.

The selection of trading/execution venues to be included in the Strategy is made taking into account:

- with respect to regulated markets and MTFs, the following factors:
 - liquidity;
 - execution costs;
 - settlement likelihood and the relative costs;
 - speed of execution;
- regarding the IS, selected market makers/liquidity providers, of the following requirements:
 - standing (in terms of creditworthiness, reliability, and professionalism;
 - market share;
 - the ratio of orders accepted to orders received;
 - ability to state prices that reflect market conditions;
 - technology adopted in the supply chain (specifically, for receiving orders and advising of their execution);
 - settlement likelihood and the relative costs;
 - speed of execution.

If Banca Akros does not have direct access to them, trading venues are reached through brokers, for whose selection the Bank takes into account the following factors:

- standing (in terms of credit rating, reliability, professionalism, market share;
- level of complexity of access to markets and/or systems and/or order execution mechanisms;
- technology adopted in the supply chain (specifically, for receiving orders and advising of their execution);
- execution costs;

• settlement likelihood and the relative costs.

Summary of the analyses and conclusions resulting from the monitoring of the quality of the implementation gathered in the execution venues in the year 2023

During 2023, the execution of Banca Akros customer orders took place according to the criteria set out in the Execution and Transmission Strategy (hereinafter the 'Strategy'). More specifically:

- customer orders on Italian equity instruments for which the Bank provides a search for the best execution service were mainly executed on the Italian trading venues of which the Bank is a direct member (regulated markets MTAA, MTAH and BGEM and EuroTLX MTF, managed by Borsa Italiana-Euronext); the low percentage of 'direct' orders (orders containing a specific instruction to execute on a specific trading venue) on the aforementioned venues confirm, on the one hand, the significant use by customers of the Bank's best execution systems and, on the other, the greater competitiveness of the aforementioned trading venues; orders on foreign equity instruments admitted for trading on venues to which the Bank is not a direct member were executed at the respective trading venues mainly through the brokers, Virtu Financial, Morgan Stanley Europe and Bank Vontobel:
- customer orders on debt securities, for which the Bank also provides a best execution search service, were mainly executed on the Italian regulated market MOTX and on the MTF Tradeweb, of which the Bank is a direct member; orders on money market instruments were instead executed, mainly, on the systematic internaliser of the Bank named AKIS (based on specific instructions from customers), or on the regulated MOT market and on the MTF Vorvel; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading venue; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading; the orders on debt securities admitted to trading on venues of which the Bank is not a direct participant were executed, in the respective trading Baader Bank and Bank Vontobel:
- customer orders on ETDs and securitised derivatives were executed on the respective venues on
 which the instruments are admitted to trading directly in cases where the Bank is a direct member
 (IDEM and Eurex regulated markets, as well as EuroTLX MTF and SEDEX MTF), exclusively against
 'direct' customer orders, and through brokers Société Générale and Vontobel in other cases;
- customer orders on ETP (exchange traded products) such as ETFs, ETNs and ETCs, for which the Bank
 also provides a best execution research service, were mainly executed on MTF Tradeweb, on the
 Italian regulated market ETFP and on the Bloomberg MTF;

• customer orders on commodity ETD derivatives were executed on the respective venues on which the instruments are admitted to trading by the Bank as a direct member in the European Energy Market (XEER), on the energy segment (XEER) and on the gas segment (XPSF) and, in the remaining cases, through the broker Société Générale.

Trading outside trading venues generally involved:

- referring to equity instruments, the execution of orders of significant size (so-called blocks) at the specific request of the customer;
- referring to bonds, the performance of trades in which Banca Akros acted as the customer's counterparty, executing the order directly as a systematic internaliser (AKIS), or as a liquidity provider, in competition with the respective trading venues/execution venues for the instruments, thereby ensuring execution at prices generally better than those available on alternative trading venues; in other cases, the Bank executed through third-party market makers, selected using criteria similar to those set out above for the identification of brokers, for bonds not traded on trading venues; during 2023, Banca Akros also executed on its own account orders relating to bonds from the portfolio management of the subsidiary Banca Aletti SpA, based on the specific criteria defined in the latter's Order Execution Strategy;
- referring to derivatives, OTC derivatives with highly customised features, as requested by the customer.

Given the volumes of orders routed to the various trading venues and the relevant characteristics of these venues in terms of volumes traded, the preceding allows us to express a reasonably well-founded opinion on the good quality of execution obtained by the trading/execution venues selected under the Bank's Order Execution Strategy. Similarly, the use of certain brokers selected within the Bank's Order Transmission Strategy was instrumental in reaching the respective trading venues of which Banca Akros is not a direct member for certain types of financial instruments

Further specific information content referred to in the regulations is detailed below:

• Relative importance given by the company to the factors of price, cost, speed, likelihood of execution or other consideration of qualitative factors in assessing execution.

In line with its strategy, during 2023 Banca Akros, in executing orders from its customers, took into consideration the following factors, listed in order of importance: i) price; ii) cost of execution; and iii) speed and probability of execution.

Any exceptions to this hierarchy were functional to ensure that customers could invest and/or disinvest at the best possible price and cost conditions, given the execution venues selected by the Bank.

• <u>Description of any close links, conflicts of interest and proprietary links between the investment company and the execution venues it has used to execute orders</u>

In 2023, Banca Akros was a shareholder, with the power to appoint one of its representatives to the Board of Directors of Vorvel S.p.A., a company that organises and manages the MTF of the same name, on which shares, bonds and certificates mainly issued by Italian entities are traded. The two bond segments of such MTF are part of the trading venues that make up the execution strategy of Banca Akros on bond instruments, within the scope of its dynamic best execution system named

SABE, while the segment reserved for certificates is included among the execution venues identified in the adopted static best execution model. Given the low trading volumes of orders on the above segments, the Bank's shareholding in the MTF management company did not affect how the Bank executed customer orders on the above types of financial instruments. Furthermore, the Bank itself was the execution venue through the AKIS systematic internaliser, on which the instruments of each type of issuer falling within the asset class of debt securities were traded in request for quote (RFQ) mode. Starting from 1 January 2024, following the incorporation from the Global Market structure of Banca Akros into Banco BPM, the role of systematic internaliser is now carried out by Banco BPM.

• <u>Description of any specific arrangements made with the execution venue concerning payments</u> <u>made or received and any discounts, rebates or non-monetary benefits obtained</u>

In 2023, Banca Akros paid the trading venues the commissions defined by them to operate on them and did not receive any incentives from them. In some cases, trading venues apply standardised pricing models for members that guarantee a reduction in commissions as the number of transactions increases. These commission systems did not influence the Bank's choice to channel orders to a particular execution venue.

- Factors that led to a change in the list of execution venues in the company's execution strategy
 In 2023, the Bank did not modify the list of trading venues reported in its Execution
 Strategy, which confirmed a degree of competitiveness deemed at least adequate to
 ensure the achievement of the best possible result for the customer and no additional
 trading/execution venues have emerged that are sufficiently competitive to be added
 to the list in the Bank's execution/transmission Strategy.
- Differences in the execution of orders according to the customer classification, the discriminating
 factors that lead to different treatment of different categories of customers and the influence, if any,
 that this has on the way orders are executed

Banca Akros customers are exclusively classified as professional customers or eligible counterparties. Many of these customers, in turn, provide order receipt and transmission (RTO) services to their retail or professional customers. The Order Execution Strategy and the operating rationale of the dynamic best execution systems that Banca Akros makes available to its customers do not vary according to the characteristics of the user customer. However, customisation of the list of trading/execution venues to be put in competition with each other and the activation of specific functional logics are envisaged, depending on the requests made by the customer, without affecting the overall functioning of the systems.

How the investment company has used data or tools relating to execution quality, including data published under Delegated Regulation (EU) 2017/575

To monitor the quality of execution of its customers' orders, Banca Akros has internal post-trading activity systems capable of reconstructing a posteriori the market conditions at the time of execution of the orders by the best execution research systems. Moreover, data from the execution venues competing against each other in the aforementioned best execution systems are used to generate indices, including daily indices, to assess their performance. In 2023, the Bank did not make use of the reports relating to the quality of execution, pursuant to Delegated Regulation (EU) 2017/575, given the suspension of the publication obligation operated by Directive (EU) no. 2021/338 ("MiFID II QuickFix").
